Complete Station & Pump Controller Options From PLC to Relay Logic

# Our Above Grade Pump Stations Just Make Better Cent\$.

Utilities cannot afford to overlook the life-cycle cost-savings offered by genuine above-grade Smith & Loveless Pump Stations, especially when compared to submersibles. Why?

S&L Pump efficiencies now reach up to 90%. Additional power savings come with optional premium efficiency motors. And all traditional routine maintenance is eliminated with the patented **SONIC START™** prime sensing system.

Of course, super-shaft S&L Pumps offer a generation or two of reliable service. Innovative factory-built station designs promote the extreme ease of quick pump inspection, critical in today's times of best management practices and tightening budgets. And as we have done for nearly 60 years, we'll always be there for our customers, decades after the sale.

*Now that makes a lot of cents. For real results, contact us today!*
